Newsletter - Technical Bulletin. Tropical grass edge finish

Fiber Thatch roofs can be finished in a tropical finish that symbolizes the tropical island finish often found in the tropics and associated with Bali thatching as well as Palm thatching. We explain the application and finish by means of some photos of this roof edge finish.

Tropical Finish (straight roof edge)

Tropical Finish (Valley

Tropical Gable finish

The “Tropical Finish” as seen on the edges of the roofs was achieved by doubling up on the tiles right on the roof edge. This finish is achieved with our standard Fiber Thatch Layered tiles; no special tiles are required for this finish.

To thicken up the finish an additional tile can be fitted on the inside of the grass edge under the last roof batten/brand ring.

The Sales Team,
(Zameka Kutuka, Danie Vorster and Jan Grobler)
